These 6 color dots represent each trend and the dots after each company's name represent its presence in that particular trend wherever applicable. We have also shown % to Net Assets for each company.

Investing in the megatrends with

BAJAJ FINSERV FLEXI CAP FUND (Nov 2023)

(An open ended equity scheme investing across large cap, mid cap, small cap stocks)

“Nothing is more powerful than an idea whose time has come” – Victor Hugo

Seizing opportunities by investing in future market leaders

Our investment strategy for Bajaj Finserv Flexi Cap Fund is sector agnostic and invests in companies that have potential for growth at faster pace within their respective sector. Currently, our portfolio is primarily tilted towards financials, manufacturing, capital goods, consumer discretionary and new age tech companies.

Financial sector is set for the long term growth as the per capita income rises alongside the GDP. Strong domestic demand in India, improving credit conditions for borrowers, and strengthened solvency and funding of Indian financial institutions will support their credit quality. Financial sector's performance to remain strong with healthy profitability – primarily driven by strong loan growth and a favourable credit environment.

Manufacturing and Capital Goods sector are poised to thrive due to government's emphasis on capex and also stand to gain significantly as large international economies adopt a China plus one strategy, to secure their supply chain. PLI Scheme is strengthening India's manufacturing sector by incentivising domestic and foreign investments. The other factors that positively attribute to manufacturing and capital goods sectors are sizable workforce, technology based infrastructure, efficient logistics, transportation network connectivity, and cost advantage. All these factors are supported with robust legal system.

Consumer Discretionary allocation in our portfolio encompasses products and services considered non-essential but desirable when people have disposable income. India's per capita income has shown consistent growth and has recently surpassed significant milestone of \$2,000 per capita. We believe similar to China and numerous other nations that experienced substantial increases in consumption after reaching the \$2,000 per capita income threshold. India may also witness strong and sustain consumption trend in the coming decade.

New age tech companies segment in India is booming and expected to grow at an handsome rate over the next few years. The growth in this segment is largely driven by increasing smartphone, internet penetration and rising disposable incomes. Our investment thesis in the new age tech companies passes the following checklist:

- Strong competitive advantage.
- Consumer adoption is on the rise.
- High return on equity
- Market leaders in their segments.
- Positive EBITDA level.
- Steady growth rate
- Strong balance sheet
