The corpus of the Scheme shall not in any manner be used in option trading, short selling or carry forward transactions as stipulated in SEBI Regulations and amended from time to time.</p> <p>Short term defensive consideration: When the Fund Manager/s believes market or economic conditions are unfavourable for investors, the scheme may invest up to 100% of its assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include permitted money market instruments, TREPS/reverse repo, etc. Such changes in the investment pattern will be for short term and defensive considerations only which would be rebalanced of the above asset allocations within 30 calendar days from the date of deviation and in accordance with SEBI Master Circular for Mutual Funds dated May 19, 2023 and any other circulars issued there under, from time to time.</p>
<p>Investment Strategy of the Scheme</p>	<p>The Scheme shall be managed to deliver the stated investment objective of providing a level of income consistent with the preservation of capital, lower risk and high liquidity through investments made primarily in money market and debt securities with maturity of up to 91 days only.</p> <p>The Scheme aims to provide an investment vehicle to meet the needs of the Investors who want to deploy their funds for a short period of time. Therefore, money market instruments like CD/CP/T-bill will have predominant allocation in the Scheme for most of the times though other tactical allocation to other instruments will also be utilized depending on market scenarios. The predominant allocation will be to high rated securities only. This will also mean that apart from usual interest rate and credit risk in any portfolio, the Liquidity risk management will also be a dominant requirement in this Scheme. In order to manage Liquidity risk, apart from maintaining the regulatory level of cash and cash equivalents, the endeavour will be to manage liquidity in line with overall macroeconomic and debt market scenario along with understanding of possible inflows and outflows from the Scheme. The overall high credit quality, short maturity, regulatory cash & cash equivalents and the maturity bucketing of different securities will play a big role in managing liquidity in an efficient way.</p> <p>The Credit Research Team will undertake evaluation of companies for any potential investment. There will be detailed bottom-up study of the financial performance and industry the company operates in. In addition to quantitative analysis, a qualitative analysis will also be undertaken to form an opinion on the corporate governance status of the company.</p> <p>Investment Philosophy & Process:</p> <p>The scheme shall manage and operate its investment strategy within the inhouse framework of the INQUBE fund philosophy. The INQUBE fund management philosophy</p>

	<p>is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the Information edge, the Quantitative edge and the Behavioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.</p> <p>The maturity profile of debt instruments will be selected in accordance with the Fund Manager's view regarding market conditions, interest rate outlook, stability of rating and liquidity requirement. The fund management team will strive to maintain a consistent performance by maintaining a balance between safety, liquidity and returns aspects of various investments. Investment views/ decisions will consider parameters like prevailing interest rate scenario, quality of the security/ instrument, maturity profile of the instrument, liquidity of the security, growth prospects of the company/ industry, and other factors in the opinion of the fund management team.</p> <p>The fund management team may deploy various quantitative tools, indicators, data analytics etc. in different combinations from time to time to develop /validate /reassess /analyze the investment decisions.</p>
<p>Risk Profile of the Scheme</p>	<ul style="list-style-type: none"> • Market Risk: The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates. • Liquidity Risk: Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme and may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. • Price Risk: Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system. • Settlement risk: The inability of the scheme to make intended securities purchases due to settlement problems could cause the scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme's portfolio. • Regulatory Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme. • Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income

	<p>from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.</p> <ul style="list-style-type: none"> • Credit Risk: Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. • Risks associated with investment in unlisted securities: Subject to applicable Regulations, the scheme can invest in unlisted securities. These securities are subject to greater price fluctuations, less liquidity and greater risk than the listed securities. Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange (“unlisted Securities”) which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value. • Different types of fixed income securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated. AA rated corporate bonds are comparatively less risky when compared with A rated corporate bonds. • The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio. • As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. • The scheme at times may receive large number of redemption requests leading to an asset-liability mismatch and therefore requiring the AMC to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments. • Basis Risk: Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged. • Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security. • Counterparty Risk: This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default. • Duration Risk: Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio.
--	--

Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.

- **Sovereign Risk:** Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying no default, such securities are known as securities with sovereign credit. For domestic borrowers and lenders, the credit risk on such sovereign credit is minimal, even lower than a security with “AAA” rating and hence commands a yield, which is lower than a yield on “AAA” security.

RISK MANAGEMENT STRATEGIES

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in debt and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risk associated with Debt Investment

Risk Description	Risk Mitigants/management strategy
<p>Market Risk As with all debt securities, changes in interest rates may affect the scheme’s Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.</p>	<p>In a rising interest rates scenario, the Fund Manager will endeavor to increase investment in money market securities whereas if the interest rates are expected to fall, the allocation to debt securities with longer maturity will be increased thereby mitigating risk to that extent.</p>

	<p>Liquidity or Marketability Risk This refers to the ease with which a security can be sold at or near to its valuation Yield-To- Maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.</p>	<p>The scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.</p>
	<p>Credit Risk Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.</p>	<p>A traditional SWOT analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk, a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower.</p>
	<p>Reinvestment Risk This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.</p>	<p>Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.</p>
	<p>Derivatives Risk As and when the scheme trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the</p>	<p>The fund has provision for using derivative instruments for portfolio balancing and hedging purposes. Interest Rate Swaps will be done with approved counter parties under pre approved ISDA agreements. Mark to Market of swaps, netting off of cash flow and default provision clauses will be provided as per international best practice on a reciprocal basis. Interest rate swaps and other derivative</p>

	<p>derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.</p>	<p>instruments will be used as per local (RBI and SEBI) regulatory guidelines.</p>

Potential Risk Class (PRC) Matrix

Pursuant to the provisions of SEBI Master Circular for Mutual Funds dated May 19, 2023, all debt schemes are required to be classified in terms of a Potential Risk Class matrix consisting of parameters based on maximum interest rate risk (measured by Macaulay Duration (MD) of the scheme) and maximum credit risk (measured by Credit Risk Value (CRV) of the scheme). Mutual Funds are required to disclose the PRC matrix (i.e. maximum risk that a fund manager can take in a Scheme) along with the mark for the cell in which the Scheme resides on the front page of initial offering application form, SID, KIM, common application form and scheme advertisements in the manner as prescribed in the said circular. The scheme would have the flexibility to take interest rate risk and credit risk below the maximum risk as stated in the PRC matrix. Subsequently, once a PRC cell selection is done by the Scheme, any change in the positioning of the Scheme into a cell resulting in a risk (in terms of credit risk or duration risk) which is higher than the maximum risk specified for the chosen PRC cell, shall be considered as a fundamental attribute change of the Scheme in terms of Regulation 18(15A) of SEBI (Mutual Fund) Regulations, 1996.
