Asset Allocation pattern of the scheme	<p>The asset allocation pattern for the scheme under normal circumstance is detailed in the table below:</p> <table border="1" data-bbox="326 282 1268 461"> <thead> <tr> <th rowspan="2">Instruments</th> <th colspan="2">Indicative allocations</th> <th rowspan="2">Risk profile</th> </tr> <tr> <th>Maximum</th> <th>Minimum</th> </tr> </thead> <tbody> <tr> <td>Equity and Equity related instruments including derivatives and stock options⁵</td> <td>100%</td> <td>65%</td> <td>Very High</td> </tr> <tr> <td>Debt & Money Market instruments including the margin money deployed in derivative transactions (including units of liquid schemes of Bajaj Finserv Mutual Fund)**</td> <td>35%</td> <td>0%</td> <td>Low to moderate</td> </tr> <tr> <td>Non-convertible preference shares</td> <td>10%</td> <td>0%</td> <td>Very High</td> </tr> </tbody> </table> <p>§: The exposure to derivative shown in the above asset allocation table is exposure taken against the underlying equity investments i.e. in case the scheme shall have a long position in a security and a corresponding short position in the same security, then the exposure for the purpose of asset allocation will be counted only for the long position. The intent is to avoid double counting of exposure and not to take additional asset allocation with the use of derivative. If suitable arbitrage opportunities are not available in the opinion of the Investment manager, the Scheme may hedge the equity portfolio by using derivatives or may invest in short term debt / money market instruments.</p> <p>The notional value of exposure in equity derivatives would be reckoned for equity securities exposure. 	<p>In accordance with SEBI Circular dated March 30, 2022, in the event of asset allocation falling outside the limits specified in the asset allocation table mentioned above, due to passive breaches, the fund manager will review and rebalance the same within 30 business days from the date of such deviation. In case the portfolio is not rebalanced within the period of 30 business days, justification in writing for the same including efforts taken to rebalance the portfolio shall be placed before the Investment Committee. The Investment Committee, if so desires, can extend the timelines upto 60 business days from the date of completion of mandated rebalancing period.</p> <p>In case the scheme is not rebalanced within the aforementioned mandate plus extended timelines:</p> <ol style="list-style-type: none"> The AMC shall not be permitted to launch any new scheme till the time the portfolio is rebalanced. The AMC shall not levy any exit load, (if any), on the investor exiting the Scheme. <p>In case the AUM of the deviated portfolio is more than 10% of the AUM of the main portfolio of the scheme.</p> <ol style="list-style-type: none"> The AMC shall immediately communicate the same to the investors of the scheme after the expiry of the mandated rebalancing period (i.e. 30 Business Days) through SMS and email/ letter including details of portfolio not rebalanced. The AMC shall also immediately communicate to the investors through SMS and email/letter when the portfolio is rebalanced. The AMC shall disclose scheme wise deviation of the portfolio (beyond aforesaid 10% limit) from the mandated asset allocation beyond 30 business days, on the AMC 's website i.e. www.bajajamc.com. <p>The AMC shall also disclose any deviation from the mandated asset allocation to investors along with periodic portfolio disclosures as specified by SEBI from the date of lapse of mandated plus extended rebalancing timelines.</p> <p>Pursuant to SEBI circular No. SEBI/HO/IMD/DF2/CIR/P/2016/42 dated March 18, 2016, the Scheme may deploy NFO proceeds in Triparty repo on Government securities or treasury bills (TREPS) before the closure of NFO period. However, the AMC shall not charge any investment management and advisory fees on funds deployed in TREPS during the NFO period</p> <p>At the time of building up the portfolio post NFO, the Fund Manager may deploy the funds in units of liquid mutual fund schemes to the extent permitted under SEBI (Mutual Funds) Regulations, 1996, in case suitable debt / money market instruments are not available or the Fund Manager is of the view that the risk-reward is not in the best interest of the unit holders.</p> <p>All of the Scheme's assets will be invested in transferable securities. The corpus of the Scheme shall not in any manner be used in option trading, short selling or carry forward transactions as stipulated in SEBI Regulations and amended from time to time.</p> <p>Pending deployment of the funds in securities in terms of investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of the Scheduled Commercial Banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007 and September 20, 2019, as may be amended from time to time.</p> <p>Short term defensive consideration: When the Fund Manager/s believes market or economic conditions are unfavourable for investors, the scheme may invest up to 100% of its assets in a temporary defensive manner by holding all or a substantial portion of its assets in cash, cash equivalents or other high quality short-term investments. Temporary defensive investments generally may include permitted money market instruments, TREPS/ reverse repo, etc. Such changes in the investment pattern will be for short term and defensive considerations only which would be rebalanced to either of the above asset allocations within 30 calendar days from the date of deviation and in accordance with SEBI circular dated March 04, 2021 and any other circulars issued there under, from time to time.</p>
Investment Strategy of the Scheme	<p>The Fund Manager will identify and take advantage of market neutral arbitrage opportunities by executing deals simultaneously in both markets. In compliance with SEBI guidelines, the Scheme will not engage in short selling in the cash market at any time.</p> <p>The debt component of the Scheme will be invested in debt securities and money market instruments, with the primary aim of generating income while minimizing interest rate risk.</p> <p>Some of the arbitrage strategies that may be employed by the fund manager include:</p> <p>Cash-Future Arbitrage: For example, let's say the price of XYZ stock in the spot market is Rs 100, while the price of the same stock in the futures market is Rs 105. After adjusting for taxes and other costs, the Scheme will buy the stock in the spot market for Rs 100 and simultaneously sell the same stock in the futures market for Rs 105, earning the cost of carry between the stock and its futures.</p> <p>Rolling over of the Futures Transaction: This strategy involves unwinding the short position in the current month's futures and simultaneously selling futures of the subsequent month, while holding onto the spot position. For example, if the fund manager anticipates a change in market conditions, they may choose to unwind their current month's futures position and roll it over to the subsequent month.</p> <p>Dividend Arbitrage: For example, prior to a dividend declaration, the stock futures/options market may provide a profitable opportunity. Typically, the stock price declines by the dividend amount when the stock goes ex-dividend. The fund manager may take advantage of this by buying the stock in the spot market and selling the same stock in the futures market.</p> <p>Buy-back Arbitrage: This strategy involves taking advantage of the price differential between the buy-back price and the traded price when a company announces a buy-back of its own shares. For example, if a company announces a buy-back at Rs 100 per share, while the current market price is Rs 95, its futures price is likely to be higher in anticipation of the buy back price. Here, the fund manager may choose to buy the stock at Rs 95 and sell its futures price at say Rs 100 to capture the high arbitrage opportunity.</p> <p>Nifty Spot-Nifty Futures: This strategy involves exploiting the difference in pricing between the Nifty and Nifty futures. For example, if the Nifty is currently at 20,000 and the Nifty futures are at 21,050, the fund manager may choose to buy the Nifty futures and sell the portfolio comprising of index stocks, earning the difference between the two.</p> <p>Buy Option: This strategy involves actively managing the options component to take advantage of market volatility. For example, if the fund manager believes that a stock's price will increase, they may choose to buy a call option on that stock.</p> <p>It's important to note that the above strategies are just examples and the fund manager may adopt other strategies as well, depending on market conditions and regulatory compliance. Additionally, the provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day-to-day basis.</p> <p>Considering the inherent characteristics of the Scheme, equity positions would have to built-up gradually and also sold off gradually. This would necessarily entail having large cash position before the portfolio is fully invested and during periods when equity positions are being sold off to book profits/losses or to meet redemption needs. Investors may note that securities which endeavor to provide higher returns typically, display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments.</p>
Risk Profile of the Scheme	<ol style="list-style-type: none"> Risks associated with investing in equities: <ul style="list-style-type: none"> Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down. The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

- Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the scheme is vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the scheme may be adversely affected due to such factors.
 - While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.
 - Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend. There can be no assurance that such historical trends would continue.
 - In case of abnormal circumstances, it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However, the scheme will aim to take exposure only into liquid stocks where there will be minimal risk to square off the transaction.
 - Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme or business prospects of the Company in any particular sector.
 - Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can afford to take the risk of losing their investment.
2. Risks associated with investing in fixed income:
- Market Risk:** The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
 - Liquidity Risk:** Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme and may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.
 - Price Risk:** Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
 - Settlement risk:** The inability of the scheme to make intended securities purchases due to settlement problems could cause the scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme's portfolio.
 - Regulatory Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme.
 - Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
 - Credit Risk:** Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
 - Risks associated with investment in unlisted securities:** Subject to applicable Regulations, the scheme can invest in unlisted securities. These securities are subject to greater price fluctuations, less liquidity and greater risk than the listed securities. Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
 - Different types of fixed income securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk.** Accordingly, the scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated. AA rated corporate bonds are comparatively less risky when compared with A rated corporate bonds.
 - The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
 - As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.
 - The scheme at times may receive large number of redemption requests leading to an asset-liability mismatch and therefore requiring the AMC to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
 - Basis Risk:** Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.
 - Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
 - Counterparty Risk:** This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
 - Duration Risk:** Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.
 - Sovereign Risk:** Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying no default, such securities are known as securities with sovereign credit. For domestic borrowers and lenders, the credit risk on such sovereign credit is minimal, even lower than a security with "AAA" rating and hence commands a yield, which is lower than a yield on "AAA" security.
