#### Investment Strategy of the Scheme

The investment strategy aims to generate income and capital appreciation by investing across equity and equity related instruments including equity derivatives, debt & debt derivatives and money market instruments, Gold ETFs, Silver ETFs, ETCDs and in units of REITs & InvITs. The portfolio will manage the fund within the ambit of its in-house fund philosophy – INQUBE.

The Scheme may invest in various derivative instruments which are permissible under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing, or such other purpose as may be permitted under the regulations and Guidelines from time to time. Such investments shall be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index). Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument such as interest rates, exchange rates, commodities and equities.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

In pursuance of Investment Objective of the Scheme, the Scheme may use derivatives to generate income through arbitrage opportunities such as Index/Stock Spot vs Index/Stock Futures or Index Futures or Future of same stock with different expiry months or underlying shares etc. The Scheme may also use corporate action or event driven strategy where there is a potential opportunity for arbitrage in cash or derivative market such as dividend arbitrage or buy-back arbitrage or merger etc.

The scheme's equity portfolio will seek to invest in dividend-yielding opportunities to provide investors with relatively low-risk, cash-generating prospects for the portfolio and to allow for the growth opportunities in the play out over the period. The security selection will emphasize on criteria such as dividend track record, payout ratios, growth in cash flow generation, and other growth metrics such as ROCE, ROE etc. However, the fund manager retains the discretion to pursue investment opportunities regardless of the style, with the aim of optimizing the risk-reward trade-off for the portfolio from time to time.

The scheme's allocation to equity, debt, and commodities will be dynamic, guided by internal models considering factors such as valuation levels, macroeconomic conditions, and capitalization rates. The scheme may invest in Exchange Traded Commodity Derivatives (ETCD) or ETFs with commodity underlying assets, as well as other permissible instruments linked to commodity prices.

The scheme may also invest in overseas financial assets for diversification purposes, subject to SEBI/RBI regulations.

The research framework incorporates data, behavioral and market sentiment fundamental insights to guide cross-asset and cross-market allocation decisions. Stock selection is driven by a macro narrative considering factors such as valuation, liquidity, risk appetite, and the impact of time on these dimensions.

The scheme's investment strategy may be reviewed and modified as deemed necessary in the best interest of unit holders and market conditions

The portfolio construction emphasizes broad diversification, ongoing review of market parameters, and focus on investment-grade debt securities. The scheme maintains a focus on credit quality, liquidity, and interest rate outlook for debt investments. Risk control measures and rigorous credit evaluation are incorporated to mitigate risks.

The fund shall pursue its investment strategy within the contours of the inhouse proprietary fund management philosophy called 'INQUBE'.

#### INQUBE Investment Philosophy:

The INQUBE fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the Information edge, the Quantitative edge and the Behavioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.

To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.

At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. While undertaking the allocation decisions, the business shall be filtered on account of its size, quality, valuation, growth outlook, and risk; to measure and structure the allocation.

The AMC/Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

#### Risk Profile of the Scheme

Bajaj Finserv Multi Asset Allocation Fund would be investing in Equity & Equity related Securities, Debt & Money Market Instruments, Gold ETFs, Silver ETFs and Exchange Traded Commodity Derivatives (ETCDs), in units of REITs & InvITs and such other asset classes permitted by SEBI from time to time. Different asset class carry different types of risk as mentioned in the Scheme Information Document. Accordingly, the scheme's risk may increase or decrease depending upon the investment pattern.

#### Risks associated with investing in equities:

- Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio.
- The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.
- The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk
  of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of
  rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits
  accruing thereon.
- Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment
  of dividend in the past) may continue paying dividend in future. As such, the scheme is vulnerable to instances where investments in securities may not

- earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the scheme may be adversely affected due to such factors.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests
- on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.

  Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend. There can be no assurance that such historical trends would continue.
- In case of abnormal circumstances, it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However, the scheme will aim to take exposure only into liquid stocks where there will be minimal risk to square off the transaction.
- Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme or business prospects of the Company in any particular sector.
- business prospects of the Company in any particular sector.

  Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can afford to take the risk of losing their investment.

#### 2. Risks associated with investing in fixed income:

- Market Risk: The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Liquidity Risk: Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme and
  may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market conditions leading to
  changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in
  value of the portfolio.
- Price Risk: Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Settlement risk: The inability of the scheme to make intended securities purchases due to settlement problems could cause the scheme to miss certain
  investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the extraneous factors that may
  impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme's portfolio.
- Regulatory Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme
- Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional
  income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower
  than that originally assumed.
- Credit Risk: Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- Risks associated with investment in unlisted securities: Subject to applicable Regulations, the scheme can invest in unlisted securities. These securities are subject to greater price fluctuations, less liquidity and greater risk than the listed securities. Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
- Different types of fixed income securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated corporate bonds are comparatively less risky when compared with A rated corporate bonds.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in
  interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer
  attractive yields. This may increase the risk of the portfolio.
- attractive yields. This may increase the risk of the portfolio.
  The scheme at times may receive large number of redemption requests leading to an asset-liability mismatch and therefore requiring the AMC to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- Basis Risk: Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.
   Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this
- Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
   Counterparty Risk: This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration
- Counterparty Risk: This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration
  against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- Duration Risk: Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio. Sovereign Risk: Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It
- Sovereign Risk: Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying no default, such securities are known as securities with sovereign credit. For domestic borrowers and lenders, the credit risk on such sovereign credit is minimal, even lower than a security with "AAA" rating and hence commands a yield, which is lower than a yield on "AAA" security.

#### Application Supported by Blocked Amount (ASBA)

ASBA provides an alternative mode of payment whereby the application money remains in the investor's account till allotment of units. ASBA process facilitates investors to apply through Self Certified Syndicate Banks (SCSBs), in which the investors have their bank accounts. SCSBs would accept the applications, verify the application, block the fund to the extent of investment amount, unblock once the allotment is finalized and debit the investor's account.
