Investment Strategy	The Bajaj Finserv Healthcare Fund is an open ended actively managed equity scheme which aims to provide long-term capital appreciation by investing 80-100% of total assets in equity and equity related securities of companies classified under 'Healthcare Equipment & Supplies, Healthcare Services, Pharma- ceuticals & Biotechnology' as per Industry classification issued by AMFI from time to time and any other industry/sector that forms part of the benchmark index. The Scheme may also invest in companies involved in other healthcare, pharmaceutical and allied sectors. The scheme would invest in stocks across market capitalization, however, may take concentrated exposure to certain stocks/sectors/industry.					
	Examples of industries/sectors classified under 'Healthcare Equipment & Supplies, Healthcare Services, Pharmaceuticals & Biotechnology' are as follows:					
	 Biotechnology Healthcare Research, Analytics & Technology Healthcare Service Provider Hospital Medical Equipment & Supplies 					
	Pharmaceuticals Over the counter medicine, nutraceutical Any other industry/sector that forms part of the benchmark index					
	Please note that the above list is indicative, and the Fund Manager may add such other sector/industries which satisfy the pharma, healthcare and allied theme. The Fund Manager may also add other sectors as may be added in the BSE Healthcare Index from time to time.					
	The scheme may invest upto 20% of its total assets in equities and equity related securities of other than pharma, healthcare and allied companies.					
	The scheme may use Derivatives traded on recognized stock exchanges for the purpose of hedging, portfolio rebalancing and other purposes as may be permitted by SEBI. Although the scheme will predominantly invest in pharma, healthcare and allied companies, it retains the flexibility to take some exposure beyond such companies based on the asset allocation pattern of the scheme.					
	The scheme intends to use equity derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of Futures, Options, Swaps or any other instrument, as may be permitted from time to time. For detailed derivative strategies, please refer to SAI.					
	The scheme defines the pharma, healthcare and allied theme as those which encompasses a broad array of industries and services that contribute to the enhancement of physical, mental, and emotional health. This theme is diverse, including traditional healthcare services as well as alternative or preventative or curative or palliative measures focused on improving overall well-being.					
	The Scheme may use SLBM for earning additional income for the scheme with a lesser degree of risk. Scheme may invest in the units of Mutual Fund schemes of Bajaj Finserv Mutual Fund or any other Mutual Funds in terms of the prevailing SEBI (MF) Regulations.					
	The Scheme may also invest a part of its corpus in overseas markets in Global Depository Receipts (GDRs), ADRs, overseas equity, bonds and mutual funds and such other instruments as may be allowed under the Regulations from time to time.					
	The scheme may take exposure in units of REIT and InvITs at an opportune time to generate income from real estate or infrastructure assets. Investing in units of REITs and InvITs has the potential to generate capital appreciation and regular income streams.					
	Fixed Income securities The Scheme may also invest in Debt and Money Market Securities/Instruments (Money Market securities include cash and cash equivalents). The Scheme aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio. With the aim of controlling risks rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Risk Management Team of the AMC. The credit evaluation includes a study of the operating environment of the issuer, the short as well as long-term financial health of the issuer. Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC may consider the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of rating agencies. The Scheme may invest in securitised debt.					
	In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.					

	The scheme intends to use fixed income derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of forward rate agreement, interest rate Swaps, interest rate future or any other instrument, as may be permitted from time to time. For detailed derivative strategies, please refer to SAI.
	Further, the Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.
	For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.
	The scheme may undertake repo transactions in corporate debt securities in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed.
	The scheme may also invest in Additional Tier 1 (AT1) and Tier 2 (AT2) bonds issued by high quality banks under the BASEL III framework.
	The Scheme may invest in debt instruments having structured obligations / credit enhancements.
	Portfolio Turnover: The scheme being an open ended scheme, it is expected that there would be frequent subscriptions and redemptions. Hence, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. If trading is done frequently there may be an increase in transaction cost such as brokerage paid etc. The fund manager shall endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. The Scheme has no specific target relating to portfolio turnover.
	Portfolio Turnover Ratio: Not Applicable (Since the scheme is a new fund to be launched, the said ratio is not applicable)
	Investment Philosophy & Process:
	Change is a principal quality of our business environment. There are obviously some businesses that adapt to these changes and ride these mega trends; while some end up losing their market share or profits, failing to adapt to these changes. It is important to consider these mega trends in investing.
	Structural changes demand that the incumbent, dominant companies, or business ecosystems, prepare for them if they want to stay in control of their market positions. Challenger companies, or up-and-coming business ecosystems often capitalize on these changes to enter existing markets or establish new ones. These moves are reflected in constantly shifting profit pools. In this fund, it is our endeavour to invest in companies that benefit from the trend driven by healthcare theme.
	INQUBE Investment Philosophy:
	The INQUBE fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the <u>Inf</u> ormation edge, the <u>Qu</u> antitative edge and the <u>Be</u> havioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.
	To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.
	At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. While undertaking the allocation decisions, the business shall be filtered on account of its size, quality, valuation, growth outlook, and risk; to measure and structure the allocation
	The AMC/Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.
	The scheme intends to use derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of Swaps or any other instrument, as may be permitted from time to time.
	The Margin for derivatives transactions may be placed in the form of such securities/instruments/deposits as may be permitted/eligible to be placed as margin from the assets of the Scheme. The securities/instruments/deposits so placed as margin shall be classified under the applicable category of assets for the purposes of asset allocation.
Risk Profile of the	Scheme specific risk factors:
Scheme	The scheme being theme specific will be largely affected by the risks associated with pharma, healthcare and allied companies. The portfolio will comprise predominantly of equity and equity related securities of pharma, healthcare and allied companies. The scheme will be subjected to concentration risk as the fund is mandated to invest in the companies belonging to specified theme which would limit its investment universe, hence the scope for diversification could be limited at times. This may result in the portfolio NAV to be more volatile as compared to a diversified portfolio and would have a material adverse bearing on the performance of the Scheme.
	1. Risks associated with investing in equities:
	 Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and
	 other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down. The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits
	 Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the scheme is vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the scheme may be adversely affected due to such factors.
	 While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests. Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend. There can be no assurance that such historical trends would continue. In case of abnormal circumstances, it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market.
	 However, the scheme will aim to take exposure only into liquid stocks where there will be minimal risk to square off the transaction. Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme or business prospects of the Company in any particular sector.
	 Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can afford to take the risk of losing their investment.

	2. Risks associated with investing in fixed income:							
	Market Risk: The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest							
	rates. The NAV of the scheme is or rates.	expected to increase from a fall in inte	erest rates while it would be adversely affe	ected by an increase in the level of interest				
	 Liquidity Risk: Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of and may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market condition changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leaving of the portfolio. 							
	 Price Risk: Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest raprices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Gov 							
	Securities. It exists for all fixed in	•	ent Securities are unique in the sense th	at their credit risk generally remains zero.				
	Settlement risk: The inability of	the scheme to make intended securit	ies purchases due to settlement problem	s could cause the scheme to miss certain				
	impact liquidity would result, at Regulatory Risk: Changes in gov	investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme's portfolio. Regulatory Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme.						
	Reinvestment Risk: This risk refe	vestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional me from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower						
			an issuer's inability to meet interest and	principal payments on its obligations and				
	Risks associated with investment	nt in unlisted securities: Subject to ap		est in unlisted securities. These securities				
	the scheme has the power to inv price fluctuations, less liquidity	vest in securities which are not listed and greater risk than those which are	on a stock exchange ("unlisted Securitie	ecurity of an associate or group company, s") which in general are subject to greater urities may lack a liquid secondary market				
	 Different types of fixed income s 	ecurities in which the scheme would i	nvest as given in the Scheme Information	Document carry different levels and types				
	than Government securities. Fu	rther even among corporate bonds, b		prporate bonds carry a higher level of risk tively less risky than bonds, which are AA				
		verall level of risk of the portfolio, inve may increase the absolute level of risk		er yields as well as zero coupon securities				
				ecurities are more sensitive to changes in nvest in zero coupon securities that offer				
	 attractive yields. This may increa The scheme at times may receiv 		sts leading to an asset-liability mismatch a	and therefore requiring the AMC to make a

		chmark might increase leading to los sk of failure of counterparty to a trans		ideration received or to pay consideration				
	against securities delivered, in f	ull or in part or as per the agreed spec	ification. There could be losses to the Sch	neme in case of a counterparty default.				
	 Duration Risk: Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis a shorter duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio. Sovereign Risk: Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign credit is minimal, even lower than a security with "AAA" rating
