Investment Strategy

The Bajaj Finserv Small Cap Fund is an open ended actively managed equity scheme aims to provide long-term capital appreciation by investing 65-100% of total assets in equity and equity related securities of small cap companies and balance in equity and equity related securities of large and mid cap companies and debt and money market instruments.

The investment strategy and fund philosophy of the fund aims to preserve capital and minimize downside risk experience for the investor prioritizing risk management. We maintain a disciplined and data-driven process, focusing on high-quality and stable assets. Guided by our in-house investment philosophy – INQUBE – our long-term perspective and continuous research aim to help us identify and build a portfolio of securities with strong growth potential and the potential to deliver superior risk-adjusted returns over the long term.

The scheme may also take opportunistic investment allocation in large cap and mid cap stocks and in growth opportunities within the contours of regulatory mandate and scheme investment guidelines.

The Scheme will capitalize on the opportunities that lie in the small-cap segment. The Scheme may also invest in equity and equity related instruments of companies other than in small cap segments. Small Cap companies offer higher return potential than large cap companies on one hand but also carry higher risk than large cap companies, particularly over the short to medium term. The following are some of the reasons why Small Cap companies offer higher return potential.

- Relatively less known by market participants/price discovery by market is not full.
- Better growth prospects due to presence in a new segment/area that is growing at a faster pace.
- Ability to gain share due to new technology, better product/ service etc.
- Room for P/E multiples to expand if the company transitions from a small cap to midcap to large cap

In addition to the above, the AMC in selecting scrips will also focus on the fundamentals of the business, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company and the key earnings drivers.

The scheme may use Derivatives traded on recognized stock exchanges for the purpose of hedging, portfolio rebalancing and other purposes as may be permitted by SEBI. Derivatives instruments may take the form of Futures, Options, Swaps or any other instrument, as may be permitted from time to time. For detailed derivative strategies, please refer to SAI.

The Scheme may use SLBM to earn additional income for the scheme with a lesser degree of risk. Scheme may invest in the units of Mutual Fund schemes of Bajaj Finserv Mutual Fund or any other Mutual Funds in terms of the prevailing SEBI (MF) Regulations.

The Scheme may also invest a part of its corpus in overseas markets in Global Depository Receipts (GDRs), ADRs, overseas equity, bonds and mutual funds and such other instruments as may be allowed under the Regulations from time to time.

The scheme may take exposure in units of REIT and InvITs at an opportune time to generate income from real estate or infrastructure assets. Investing in units of REITs and InvITs has the potential to generate capital appreciation and regular income streams.

Fixed Income securities

The Scheme may also invest upto 35% of its total assets in Debt and Money Market Securities/Instruments (Money Market securities include cash and cash equivalents). The Scheme aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio. With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Risk Management Team of the AMC. The credit evaluation includes a study of the operating environment of the issuer, the short as well as long-term financial health of the issuer. Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC may consider the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of rating agencies. The Scheme may invest in securitized debt.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The scheme intends to use fixed income derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of forward rate agreement, interest rate Swaps, interest rate future or any other instrument, as may be permitted from time to time. For detailed derivative strategies, please refer to SAI.

Further, the Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.

For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.

The scheme may undertake repo transactions in corporate debt securities in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed.

The scheme may also invest in Additional Tier 1 (AT1) and Tier 2 (AT2) bonds issued by high quality banks under the BASEL III framework.

The Scheme may invest in debt instruments having structured obligations / credit enhancements.

Portfolio Turnover: Portfolio Turnover is defined as the lower of purchases and sales after reducing all subscriptions and redemptions and derivative transactions there from and calculated as a percentage of the average assets under management of the scheme during a specified period of time.

The scheme being an open ended scheme, it is expected that there would be frequent subscriptions and redemptions. Hence, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. If trading is done frequently there may be an increase in transaction cost such as brokerage paid etc. The fund manager shall endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. The Scheme has no specific target relating to portfolio turnover.

Portfolio Turnover Ratio: Not Applicable (Since the scheme is a new fund to be launched, the said ratio is not applicable)

INQUBE Investment Philosophy:

The INQUBE fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the Information edge, the Quantitative edge and the Behavioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.

To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.

At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. While undertaking the allocation decisions, the business shall be filtered on account of its size, quality, valuation, growth outlook, and risk; to measure and structure the allocation.

The AMC/Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

The scheme intends to use derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of Swaps or any other instrument, as may be permitted from time to time.

The Margin for derivatives transactions may be placed in the form of such securities/instruments/deposits as may be permitted/eligible to be placed as margin from the assets of the Scheme. The securities/instruments/deposits so placed as margin shall be classified under the applicable category of assets for the purposes of asset allocation.

Risk Profile of the Scheme

Scheme specific risk factors:

The Scheme will primarily invest in equity and equity related securities of small-cap companies. Small cap stocks are more volatile & less liquid than large cap companies. Investors therefore should assume that liquidity risks are higher in this fund than in a normally diversified equity fund. Thus, relative to large cap stocks, investing in small cap stocks, involves potentially greater volatility and liquidity risks. The market position of small cap companies is relatively weaker compared to large cap companies in similar sectors, hence have greater sensitivity to changing economic conditions. This may result in the NAV of a scheme to be more volatile as compared to the NAV of a scheme with a more diversified portfolio. And it is important to note that generally, no one class consistently outperforms the others.

Risks associated with investing in equities:

• Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio.

- The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.
- The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk
 of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of
 rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits
 accruing thereon.
- Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the scheme is vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the scheme may be adversely affected due to such factors.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume
 on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.
- Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend. There can be no assurance that such historical trends would continue.
- In case of abnormal circumstances, it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However, the scheme will aim to take exposure only into liquid stocks where there will be minimal risk to square off the transaction.
- Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme or business prospects of the Company in any particular sector.
 Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can
- Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can
 afford to take the risk of losing their investment.

2. Risks associated with investing in fixed income:

- Market Risk: The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest
 rates. The NAV of the scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest
 rates.
- Liquidity Risk: Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme
 and may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market conditions leading to
 changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in
 value of the portfolio.
- Price Risk: Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Settlement risk: The inability of the scheme to make intended securities purchases due to settlement problems could cause the scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme's portfolio.
- Regulatory Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme.
- Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Credit Risk: Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and
 market perception of the creditworthiness of the issuer.
- Risks associated with investment in unlisted securities: Subject to applicable Regulations, the scheme can invest in unlisted securities. These securities are subject to greater price fluctuations, less liquidity and greater risk than the listed securities. Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
- Different types of fixed income securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types
 of risk. Accordingly, the scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk
 than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA
 rated corporate bonds are comparatively less risky when compared with A rated corporate bonds.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in
 interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer
 attractive yields. This may increase the risk of the portfolio.
- The scheme at times may receive large number of redemption requests leading to an asset-liability mismatch and therefore requiring the AMC to make a
 distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- · Basis Risk: Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.
- Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- Counterparty Risk: This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration
 against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- Duration Risk: Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.
- Sovereign Risk: Sovereign risk is the likelihood that a Government will default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying no default, such securities are known as securities with sovereign credit. For domestic borrowers and lenders, the credit risk on such sovereign credit is minimal, even lower than a security with "AAA" rating and hence commands a yield, which is lower than a yield on "AAA" security

In case of investments through Systematic Investment Plan (SIP), Systematic Transfer Plans (STP), Other STP methods as may be offered by the AMC, IDCW Transfer, Trigger etc. the units would be allotted as per the closing NAV of the day on which the funds are available for utilization irrespective of the instalment date of the SIP, STP or record date of IDCW etc.

Since different payment modes have different settlement cycles including electronic transactions (as per arrangements with Payment Aggregators/Banks/Exchanges etc), it may happen that the investor's account is debited, but the money is not credited within cut-off time on the same date to the Scheme's bank account, leading to a gap/delay in Unit allotment. Investors are therefore urged to use the most efficient electronic payment modes to avoid delays in realization of funds and consequently in Unit allotment.
