Such deviations shall normally be for short term and defensive considerations as per SEBI Master Circular for Mutual Funds dated June 27, 2024, and the fund manager will rebalance the portfolio within 30 calendar days from the date of deviation. |
| **Investment Strategy** | The Bajaj Finserv Equity Savings Fund is an open ended actively managed equity scheme aims to provide long-term capital appreciation by investing 65-90% of total assets in equity and equity related securities and to provide income and generate stable returns by investing 10-35% of total assets in debt and money market instruments. |

| | |
|---|---|
| | The Scheme will invest in both equity and debt securities, employing a unique combination of three investment strategies - pure equity (net long equity), arbitrage and debt. The net long equity exposure is aimed to generate capital appreciation, while arbitrage opportunities and allocation to debt securities will be directed towards providing income and generate stable returns.<br><br>The net long equity exposure of the scheme will adopt a Multi cap, multi-sector strategy, dynamically allocating across diverse market capitalizations and industries to harness growth opportunities while mitigating risks. Guided by our INQUBE investment philosophy, the strategy emphasizes an informative, quantitative, and unbiased decision-making framework. This philosophy integrates advanced data analytics with rigorous qualitative assessments to identify investments that demonstrate robust fundamentals and growth potential. Stock selection will prioritize businesses with sustainable competitive advantages, sound financial health, and a proven ability to generate consistent returns. By combining structured data-driven insights with in-depth qualitative evaluations, the scheme aims to construct a well-balanced portfolio that maintains equity market participation while adhering to disciplined risk management principles.<br><br>The Scheme will take advantage of arbitrage opportunities by exploiting the price differential between cash and derivatives markets. To select stocks, the Scheme will adopt a combination of a bottom-up and top-down approach. In addition, the fund manager may also utilize the internal model for deciding equity allocation. The fixed income securities selection will be based on top-down approach, interest rates view and yield curve movements. The Scheme will actively use arbitrage opportunities to hedge the portfolio and generate low volatility returns.<br><br>The Scheme may invest in various derivative instruments which are permissible under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing, or such other purpose as may be permitted under the regulations and Guidelines from time to time. Such investments shall be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index). Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument such as interest rates, exchange rates, commodities and equities.<br><br>Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. |

| | |
|---|---|
| | The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.<br><br>The scheme intends to use equity derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of Futures, Options, Swaps or any other instrument, as may be permitted from time to time. For detailed derivative strategies, please refer to SAI.<br><br>The Scheme may use SLBM to earn additional income for the scheme with a lesser degree of risk.<br><br>The Scheme may also invest a part of its corpus in overseas markets in Global Depository Receipts (GDRs), ADRs, overseas equity, bonds and mutual funds and such other instruments as may be allowed under the Regulations from time to time.<br><br>The scheme may take exposure in units of REIT and InvITs at an opportune time to generate income from real estate or infrastructure assets. Investing in units of REITs and InvITs has the potential to generate capital appreciation and regular income streams.<br><br>**Fixed Income securities**<br>The Scheme may also invest in Debt and Money Market Securities/Instruments (Money Market securities include cash and cash equivalents). The Scheme aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio. With the aim of controlling risks rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Risk Management Team of the AMC. The credit evaluation includes a study of the operating environment of the issuer, the short as well as long-term financial health of the issuer. Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC may consider the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of rating agencies. The Scheme may invest in securitised debt.<br><br>In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.<br><br>The scheme intends to use fixed income derivatives for purposes that may be permitted by SEBI Mutual Fund Regulations from time to time. Derivatives instruments may take the form of forward rate agreement, interest rate Swaps, interest rate future or any other instrument, as may be permitted from time to time. For detailed derivative strategies, please refer to SAI. |

| | |
|---|---|
| | The Margin for derivatives transactions may be placed in the form of such securities/instruments/deposits as may be permitted/eligible to be placed as margin from the assets of the Scheme. The securities/instruments/deposits so placed as margin shall be classified under the applicable category of assets for the purposes of asset allocation.<br><br>Further, the Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.<br><br>For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.<br><br>The scheme may undertake repo transactions in corporate debt securities in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed.<br><br>The scheme may also invest in Additional Tier 1 (AT1) and Tier 2 (AT2) bonds issued by high quality banks under the BASEL III framework.<br><br>The Scheme may invest in debt instruments having structured obligations / credit enhancements.<br><br>**Portfolio Turnover:** The scheme being an open ended scheme, it is expected that there would be frequent subscriptions and redemptions. Hence, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. If trading is done frequently there may be an increase in transaction cost such as brokerage paid etc. The fund manager shall endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. The Scheme has no specific target relating to portfolio turnover.<br><br>**Portfolio Turnover Ratio:** Not Applicable (Since the scheme is a new fund to be launched, the said ratio is not applicable)<br><br>**Investment Philosophy & Process:**<br><br>Change is a principal quality of our business environment. There are obviously some businesses that adapt to these changes and ride these mega trends; while some end up losing their market share or profits, failing to adapt to these changes. It is important to consider these mega trends in investing.<br><br>Structural changes demand that the incumbent, dominant companies, or business ecosystems, prepare for them if they want to stay in control of their market positions. Challenger companies, or up-and-coming business ecosystems often capitalize on these changes to enter existing markets or establish new ones. These moves are reflected in constantly shifting profit pools. In this fund, it is our endeavour to invest in companies that benefit from |

| | |
|---|---|
| | megatrends driven by social and demographic changes.<br><br>**INQUBE Investment Philosophy:**<br><br>The **INQUBE** fund management philosophy is based on first principles understanding of the market dynamics. The process at its core emanates from the studied realisation that fund alpha is an outcome of three edges namely the **In**formation edge, the **Qu**antitative edge and the **Be**havioural edge of the investment team. At its core, the INQUBE investment philosophy borrows from human nature and behavioral finance as a knowledge discipline.<br><br>To realise the edge at the stock ideas hunting stage, the process shall involve a simultaneous application of top-down and bottom-up research to identify potential investments. It also involves evaluating business cycles and trends, such as momentum and trend reversal patterns, in order to identify potential investment opportunities and the stage of growth such potential ideas may be at.<br><br>At the ideas analysis stage, the process involves analysing the business, management and valuation to guide the stock selection process. While undertaking the allocation decisions, the business shall be filtered on account of its size, quality, valuation, growth outlook, and risk; to measure and structure the allocation.<br><br>The AMC/Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme. |
| **Risk Profile of the Scheme** | **Scheme specific risk factors:**<br><br>Bajaj Finserv Equity Savings Fund would be investing in Equity & Equity related Securities, Debt & Money Market Instruments, arbitrage opportunities and such other asset classes permitted by SEBI from time to time. Different asset class carry different types of risk as mentioned in the Scheme Information Document. Accordingly, the scheme’s risk may increase or decrease depending upon the investment pattern.<br><br>**1. Risks associated with investing in equities:**<br><br>• Investors may note that AMC/Fund Manager’s investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. |

| | |
|---|---|
| | • The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.<br>• The Mutual Fund may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to be collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.<br>• Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the scheme is vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the scheme may be adversely affected due to such factors.<br>• While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.<br>• Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend. There can be no assurance that such historical trends would continue.<br>• In case of abnormal circumstances, it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However, the scheme will aim to take exposure only into liquid stocks where there will be minimal risk to square off the transaction.<br>• Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Scheme or business prospects of the Company in any particular sector.<br>• Investments in equity and equity related securities involve a certain degree of risk and Investors should not invest in the equity scheme unless they can afford to take the risk of losing their investment.<br><br>**2. Risks associated with investing in fixed income:**<br><br>• Market Risk: The NAV of the scheme, to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates. |

| | |
|---|---|
| | • Liquidity Risk: Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme and may lead to the scheme incurring losses till the security is finally sold. The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.<br>• Price Risk: Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. This risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.<br>• Settlement risk: The inability of the scheme to make intended securities purchases due to settlement problems could cause the scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme’s portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses in case of a subsequent decline in the value of securities held in the scheme’s portfolio.<br>• Regulatory Risk: Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the scheme.<br>• Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.<br>• Credit Risk: Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.<br>• Risks associated with investment in unlisted securities: Subject to applicable Regulations, the scheme can invest in unlisted securities. These securities are subject to greater price fluctuations, less liquidity and greater risk than the listed securities. Except for any security of an associate or group company, the scheme has the power to invest in securities which are not listed on a stock exchange (“unlisted Securities”) which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.<br>• Different types of fixed income securities in which the scheme would invest as given in the Scheme Information Document carry different levels and |

| | |
|---|---|
| | types of risk. Accordingly, the scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated. AA rated corporate bonds are comparatively less risky when compared with A rated corporate bonds.<br>• The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.<br>• As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.<br>• The scheme at times may receive large number of redemption requests leading to an asset-liability mismatch and therefore requiring the AMC to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.<br>• Basis Risk: Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.<br>• Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security, this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.<br>• Counterparty Risk: This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.<br>• Duration Risk: Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually, individual duration of fixed income instruments in the portfolio is calculated and the portfolio duration is weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.<br>• Sovereign Risk: Sovereign risk is the likelihood that a Government will |

<tr>
<td></td>
<td>default on its loan obligation by failing to meet its principal payments or interest. It comes in different forms and may result in losses to investors in addition to negative political consequences. The Central Government of a country is the issuer of the local currency in that country. The Government (Central / State) raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying no default, such securities are known as securities with sovereign credit. For domestic borrowers and lenders, the credit risk on such sovereign credit is minimal, even lower than a security with “AAA” rating and hence commands a yield, which is lower than a yield on “AAA” security.<br><br>For details on risk factors and risk mitigation measures, please refer SID.</td>
