

# Bajaj Finserv Arbitrage Fund

(An open ended scheme investing in arbitrage opportunities)

August 2025

# Arbitrage in a nutshell!

The simultaneous purchase and sale of the same or similar asset in different markets in order to profit from tiny differences in the asset's listed price.

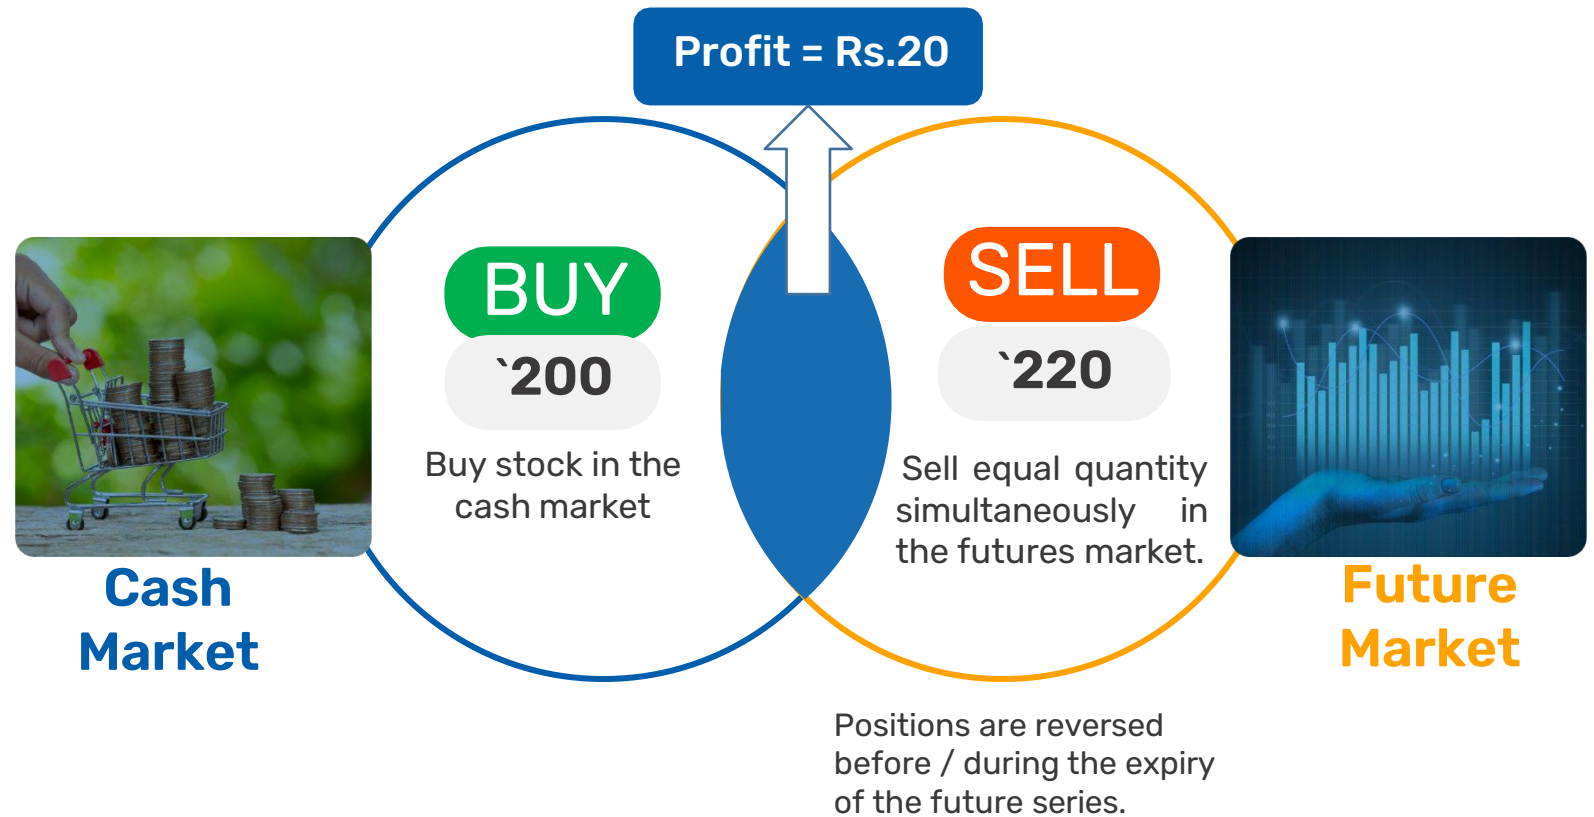

$$\text{Arbitrage} = \text{Rs } 12000 - \text{Rs } 10000 = \text{Rs } 2000$$

# Let's dive deep into Arbitrage Fund

A type of mutual fund that leverages on the price difference between cash and futures market to generate returns for one particular asset/asset class.

## Arbitrage Opportunity

Price difference prevailing in two different markets for the same security/commodity.

# DNA of Arbitrage Fund

A transaction wherein **buying and selling occurs simultaneously.**

A **security and derivative** is bought and sold

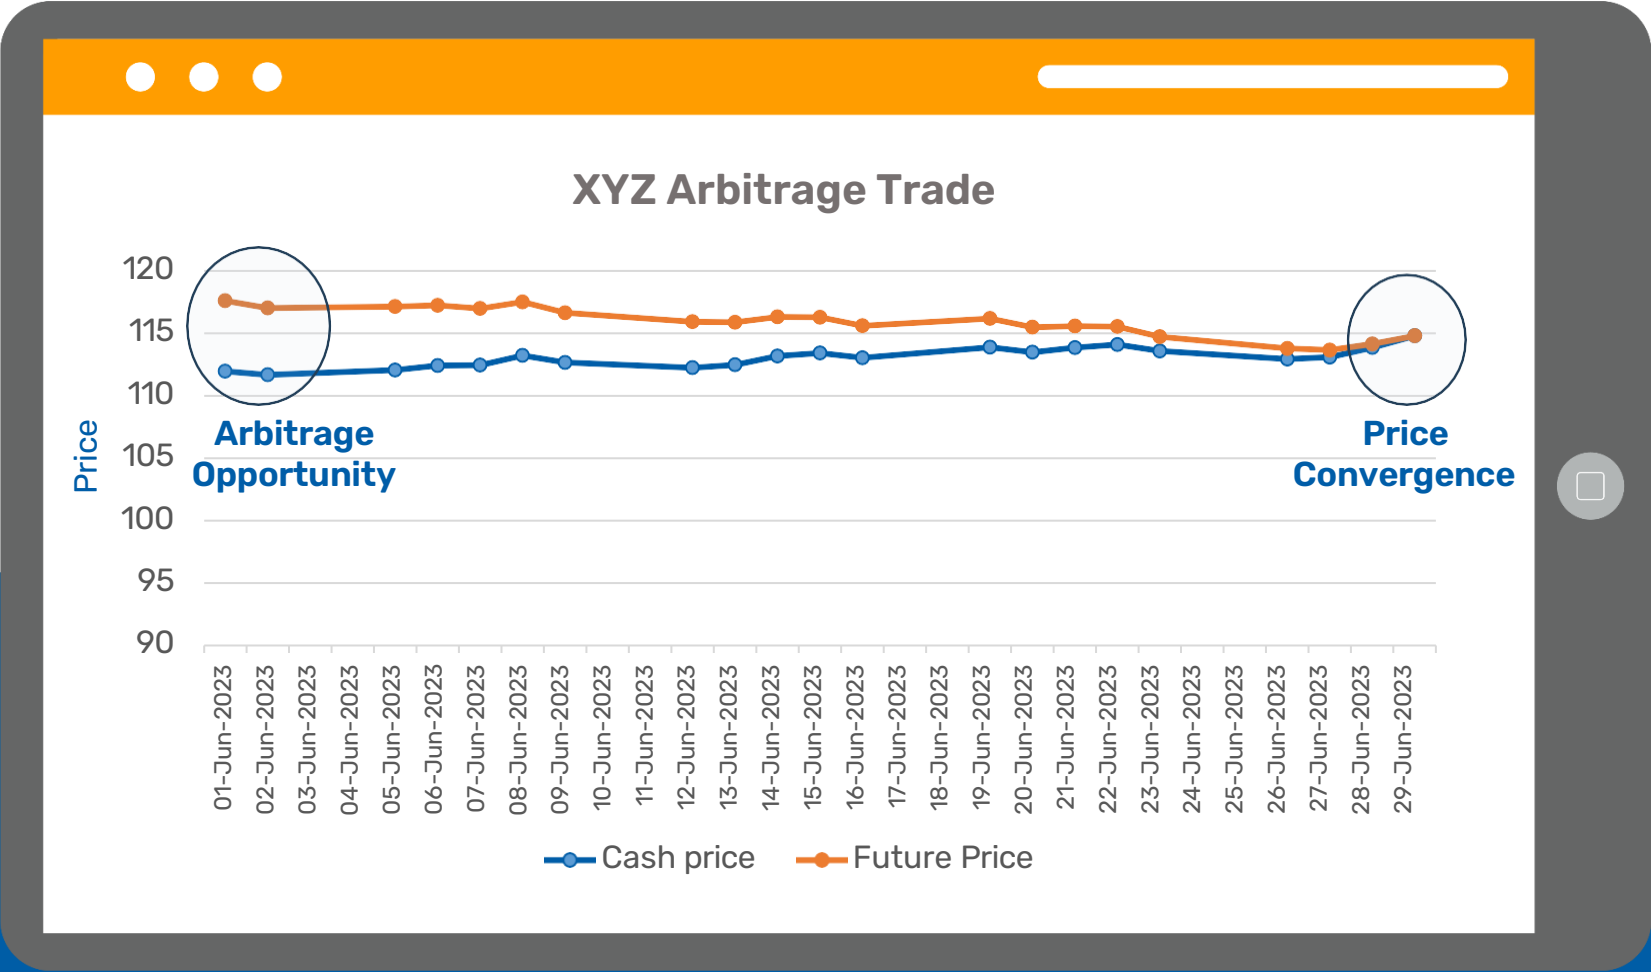

The activity happens in **two different markets** (Cash & Futures)

**Relatively Low Risk** since the cash market price converges with the futures market price at the month end.

# Example : Capturing the spread between Cash and Future prices

# Reasons for spreads between Cash and Futures markets

**Cost of Acquisition:** The cost of acquisition i.e. full consideration for cash markets and margin funding for futures contract affects their price relationship.

**Transaction Volume:** Higher acquisition costs may lead to reduced trading volume, affecting liquidity and prices in both markets.

**Participant Diversity:** Different types of traders in cash and futures markets lead to varied liquidity levels and spread dynamics.

**Settlement Timing:** Cash markets settle immediately, while futures have set expiration dates, causing spread variation as contracts approach maturity.

**Market Sentiments and Volatility:** Differences in market sentiment, economic data, and geopolitical events affects the spread width in both markets.

**Speculation:** Levels of Traders' speculative behaviour affects the spread differences between markets for arbitrage opportunities, impacting spread levels.

# Arbitrage Investment Strategies

**Spot - Futures**

**Index Arbitrage**

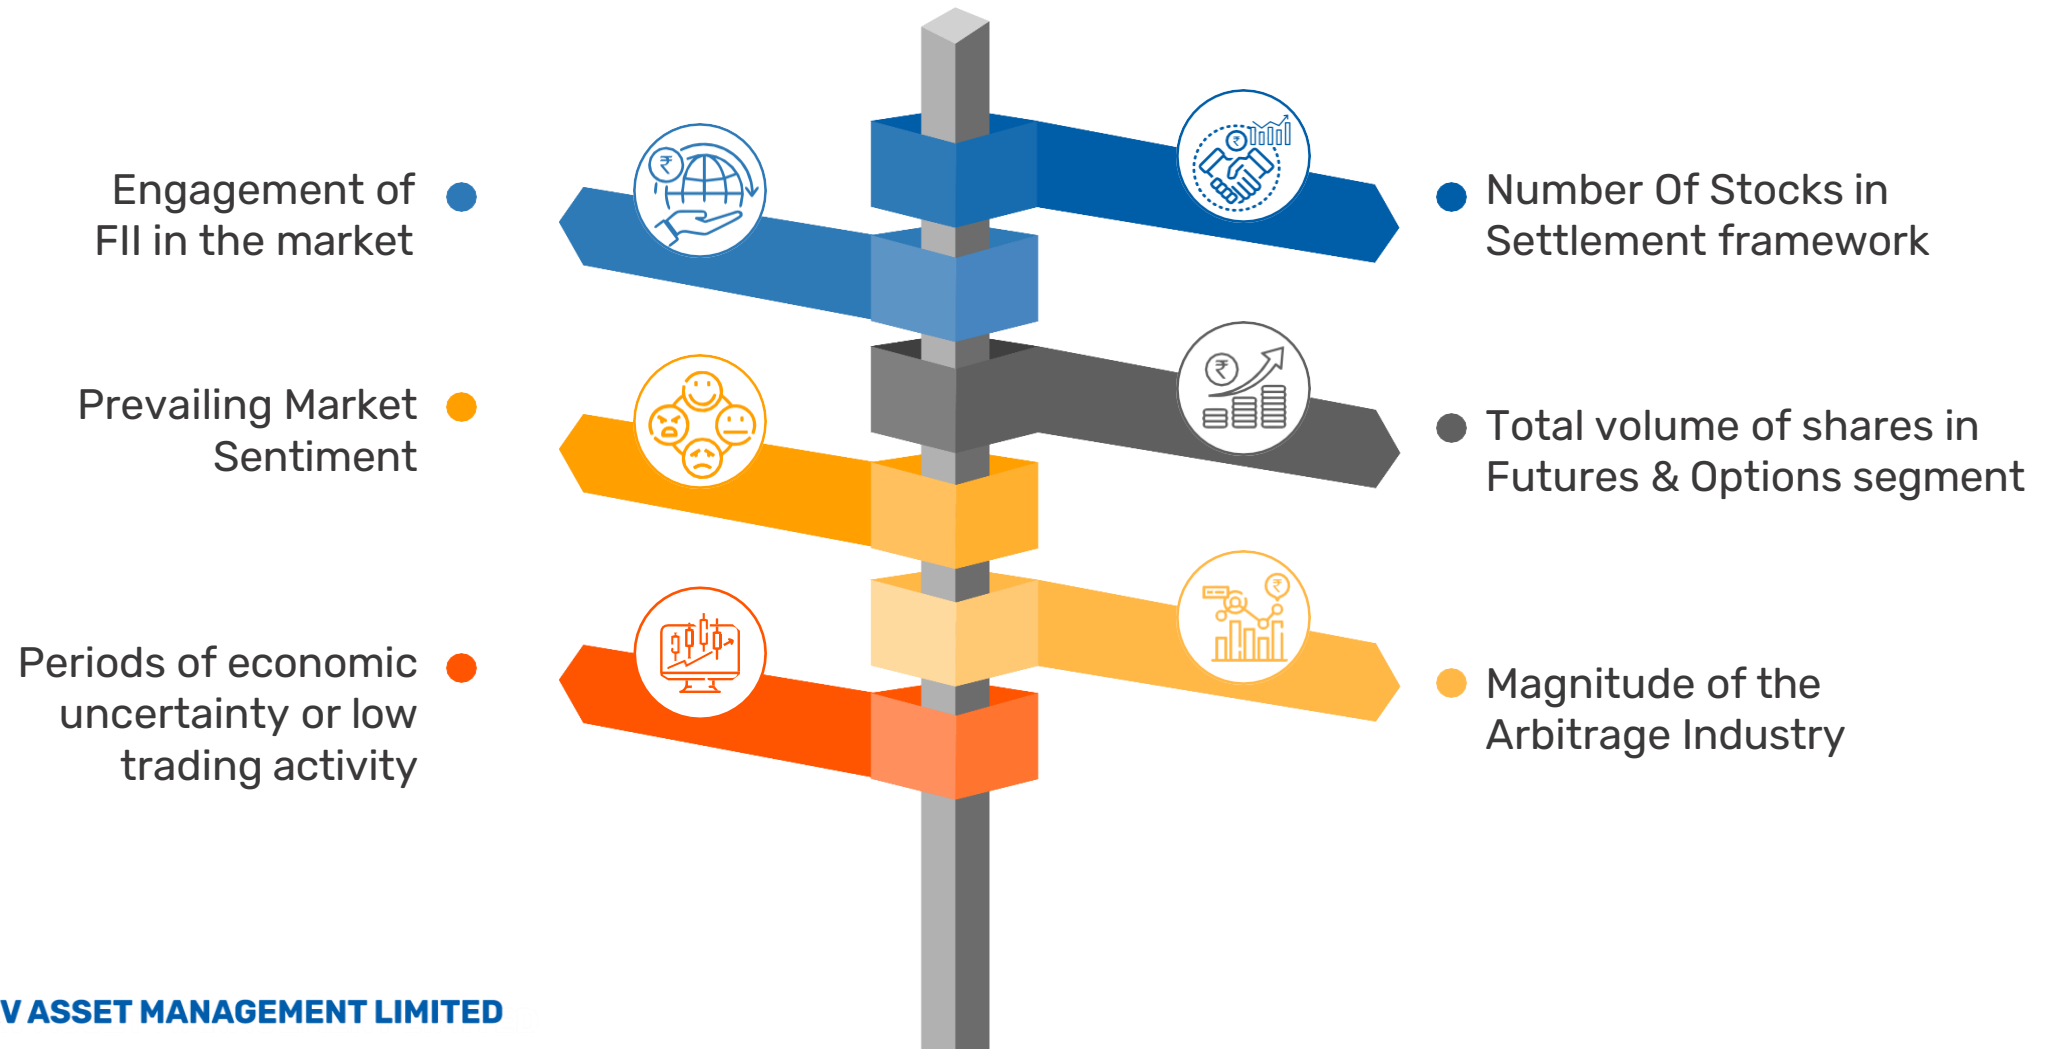

**Exchange Arbitrage**

**Dividend Arbitrage**

# Factors Impacting Spreads

Spread: Difference between buying and selling prices of a stock.

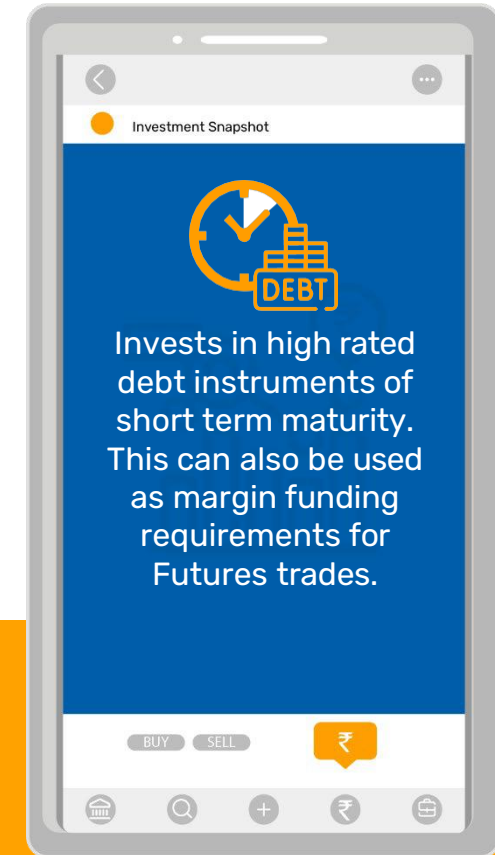

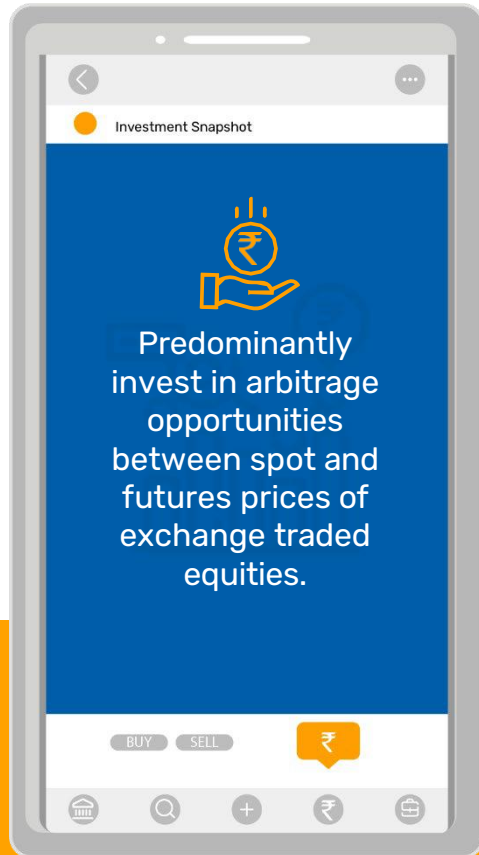

# Decoding the commonly used terms

- **Arbitrage:** The practice of exploiting price differences for the same asset in different markets to make a profit.
- **Spot Market:** Financial instruments, commodities, or assets are bought and sold for immediate delivery and settlement.
- **Futures Market:** Contracts are traded that obligate the buyer to purchase, and the seller to sell, an asset at a predetermined price and date in the future.
- **Price Discrepancy:** Difference in prices between markets that allows for potential profit.
- **Long Position:** Owning stock with the expectation of its price increasing
- **Short Position:** Borrowing or selling stock with the expectation of its price decreasing, aiming to buy it back at a lower price.
- **Spread:** Difference between buying and selling prices of a stock.
- **Hedging:** Using a strategy or instrument to offset potential losses from price movements in another asset, reducing overall risk.
- **Market Efficiency:** How well asset prices reflect all available information and adjust to new information.
- **Index arbitrage:** Trading strategy that attempts to profit from the price differences between two or more market indices.
- **Dividend arbitrage:** An options trading strategy that involves purchasing put options and an equivalent amount of underlying stock before its ex-dividend date and then exercising the put after collecting the dividend.
