

BAJAJ FINSERV MULTI ASSET ALLOCATION FUND

An open ended scheme investing in equity and equity related instruments, debt & debt derivatives and money market instruments, Gold ETFs, Silver ETFs, exchange traded commodity derivatives and in units of REITs and InvITs

Data as on 31st July 2025

Portfolio Strategy

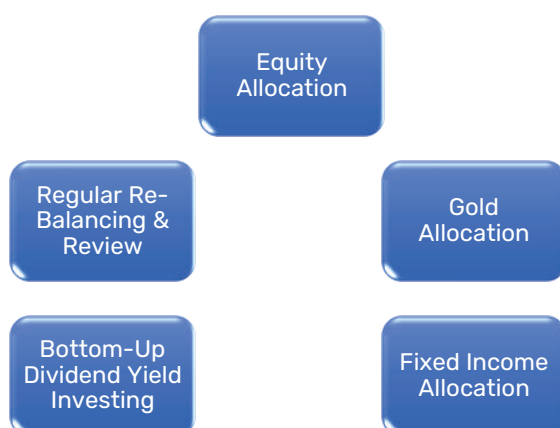

The investment strategy aims to generate income and capital appreciation by investing across equity and equity related instruments including equity derivatives, debt & debt derivatives and money market instruments, Gold ETFs, Silver ETFs, ETCDs and in units of REITs & InvITs. The portfolio will manage the fund within the ambit of its in-house fund philosophy – INQUBE.

The scheme's equity portfolio will seek to invest in dividend-yielding opportunities to provide investors with relatively low-risk, cash-generating prospects for the portfolio and to allow for the growth opportunities in the play out over the period. The security selection will emphasize on criteria such as dividend track record, payout ratios, growth in cash flow generation, and other growth metrics such as ROCE, ROE etc. However, the fund manager retains the discretion to pursue investment opportunities regardless of the style, with the aim of optimizing the risk-reward trade-off for the portfolio from time to time.

Our Equity Strategy: Growth & Dividend Payout

Quantitative Indicators*

Modified Duration¹
2.41 Years

Average Maturity²
2.83 Years

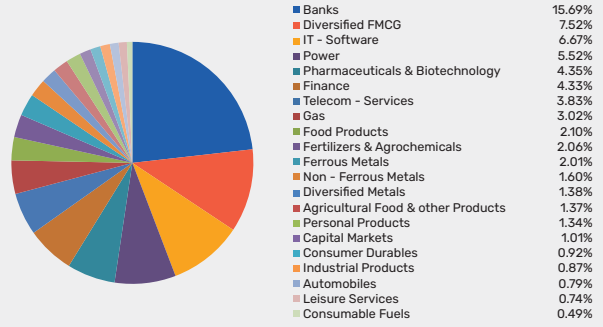

Macaulay duration³
2.59 Years

Yield to maturity⁴
7.44%

- 1 Modified duration is a formula that expresses the measurable change in the value of a security in response to a change in interest rates. Modified duration follows the concept that interest rates and bond prices move in opposite directions.
- 2 Average Maturity is the weighted average of all the residual maturities of the debt securities held in the fund. Average maturity helps to determine the average time to maturity of all the debt securities held in a portfolio and is calculated in days, months or years.
- 3 The Macaulay duration is the weighted average term to maturity of the cash flows from bonds. In other words, it is the weighted average number of years an investor must maintain a position in the bond until the present value of the bond's cash flows equals the amount paid for the bond.
- 4 Yield to maturity is the total return anticipated on a bond if the bond is held until it matures. Yield to maturity is considered a long-term bond yield but it is expressed as an annual rate

*For the debt portion of the portfolio.
