OF SPOTTING
TOMORROW'S TRENDS, TODAY WITH

BAJAJ FINSERV FLEXI CAP FUND

BAJAJ FINSERV ASSET MANAGEMENT LIMITED

WHAT ARE

Megatrends are powerful, transformative forces of change that have a lasting and far-reaching impact on economies, industries, and businesses. Unlike cyclical fluctuations, megatrends represent structural shifts that unfold over decades – such as technological evolution, demographic shifts, or regulatory formalization.

Megatrends investing is a strategic approach that identifies these long-term forces and aligns portfolios to businesses that are positioned to benefit from them in the long term. It combines a top-down understanding of the broad change and a bottom-up selection of businesses that can monetize it sustainably.

SOURCES OF MEGATRENDS

1. TECHNOLOGY

Technological innovation is the strongest driver of disruption, with AI, automation, digital payments, and Internet of Things creating new industries and transforming existing ones. The key is separating enduring shifts from passing fads.

Example:

AI-enabled tools boosting productivity across sectors.

2. REGULATION

Policy actions can reset industry growth paths. India's reforms – from GST and Production Linked Incentive scheme to Make in India, are catalysing manufacturing, financial inclusion, and formalization of the economy.

Example:

PLI incentives accelerating electronics and manufacturing growth.

3. ECONOMY

Economic shifts stem from rising incomes, financialization, and evolving consumption. India's "diamond-shaped" income pyramid supports discretionary spending, savings flows, and demand for branded goods.

Example:

Expanding middle class driving discretionary consumption.

SOURCES OF MEGATRENDS

4. NATURE

Climate change and sustainability imperatives are reshaping industries. Renewables, EVs, recycling, and eco-friendly practices are creating fast-growing green economy opportunities.

Example:

EV adoption fueling the clean mobility ecosystem.

5. DEMOGRAPHICS

India's young and growing workforce and urbanization provide a long-term demographic dividend, driving productivity, consumption, and housing demand.

Example:

Urban migration boosting infrastructure and services.

6. SOCIAL

Changing lifestyles and aspirations are shifting spending from essentials to discretionary. Health, travel, housing, and branded consumption are becoming structural demand drivers.

Example:

Rising focus on preventive healthcare and wellness.

BAJAJ FINSERV FLEXI CAP FUND WITH A MEGATRENDS INVESTING STRATEGY

As we mark the second anniversary of our flagship scheme - Bajaj Finserv Flexi Cap Fund, we reflect on a journey shaped by strategic decisions, disciplined risk management, and dynamic allocation under the theme of megatrends Investing.

FUTURE-FOCUSED:

Focusing on emerging opportunities with potential for alpha creation in long term.

HIGH ACTIVE SHARE:

Strategic selection and allocation of investments for active management.

HOLISTIC OPPORTUNITY FOCUS:

Focusing on emerging opportunities with high alpha potential.

PROFIT MOVEMENT TRACKING:

Identifying companies positioned to potentially benefit from future profit pools.

TRUE-TO-LABEL:

A true flexi cap strategy with dynamic allocation across market capitalisations.

OUR JOURNEY SO FAR

At the inception of the scheme, we adopted a staggered deployment strategy over three months to minimise risk and navigate volatility from global and domestic uncertainties. The investment approach of the scheme has remained inclined towards investing in megatrends while keeping the fund true to its label, with dynamic market-cap allocations and sector positioning aligned to evolving market conditions.

- Investment universe built top-down, focused on megatrend beneficiaries.
- Security selection driven by bottom-up, company-specific evaluation.
- Valuation discipline guides portfolio construction and weight adjustments.
- Dynamic allocation across market caps captures opportunities in both bull and bear markets.

MARKET CAP ALLOCATION

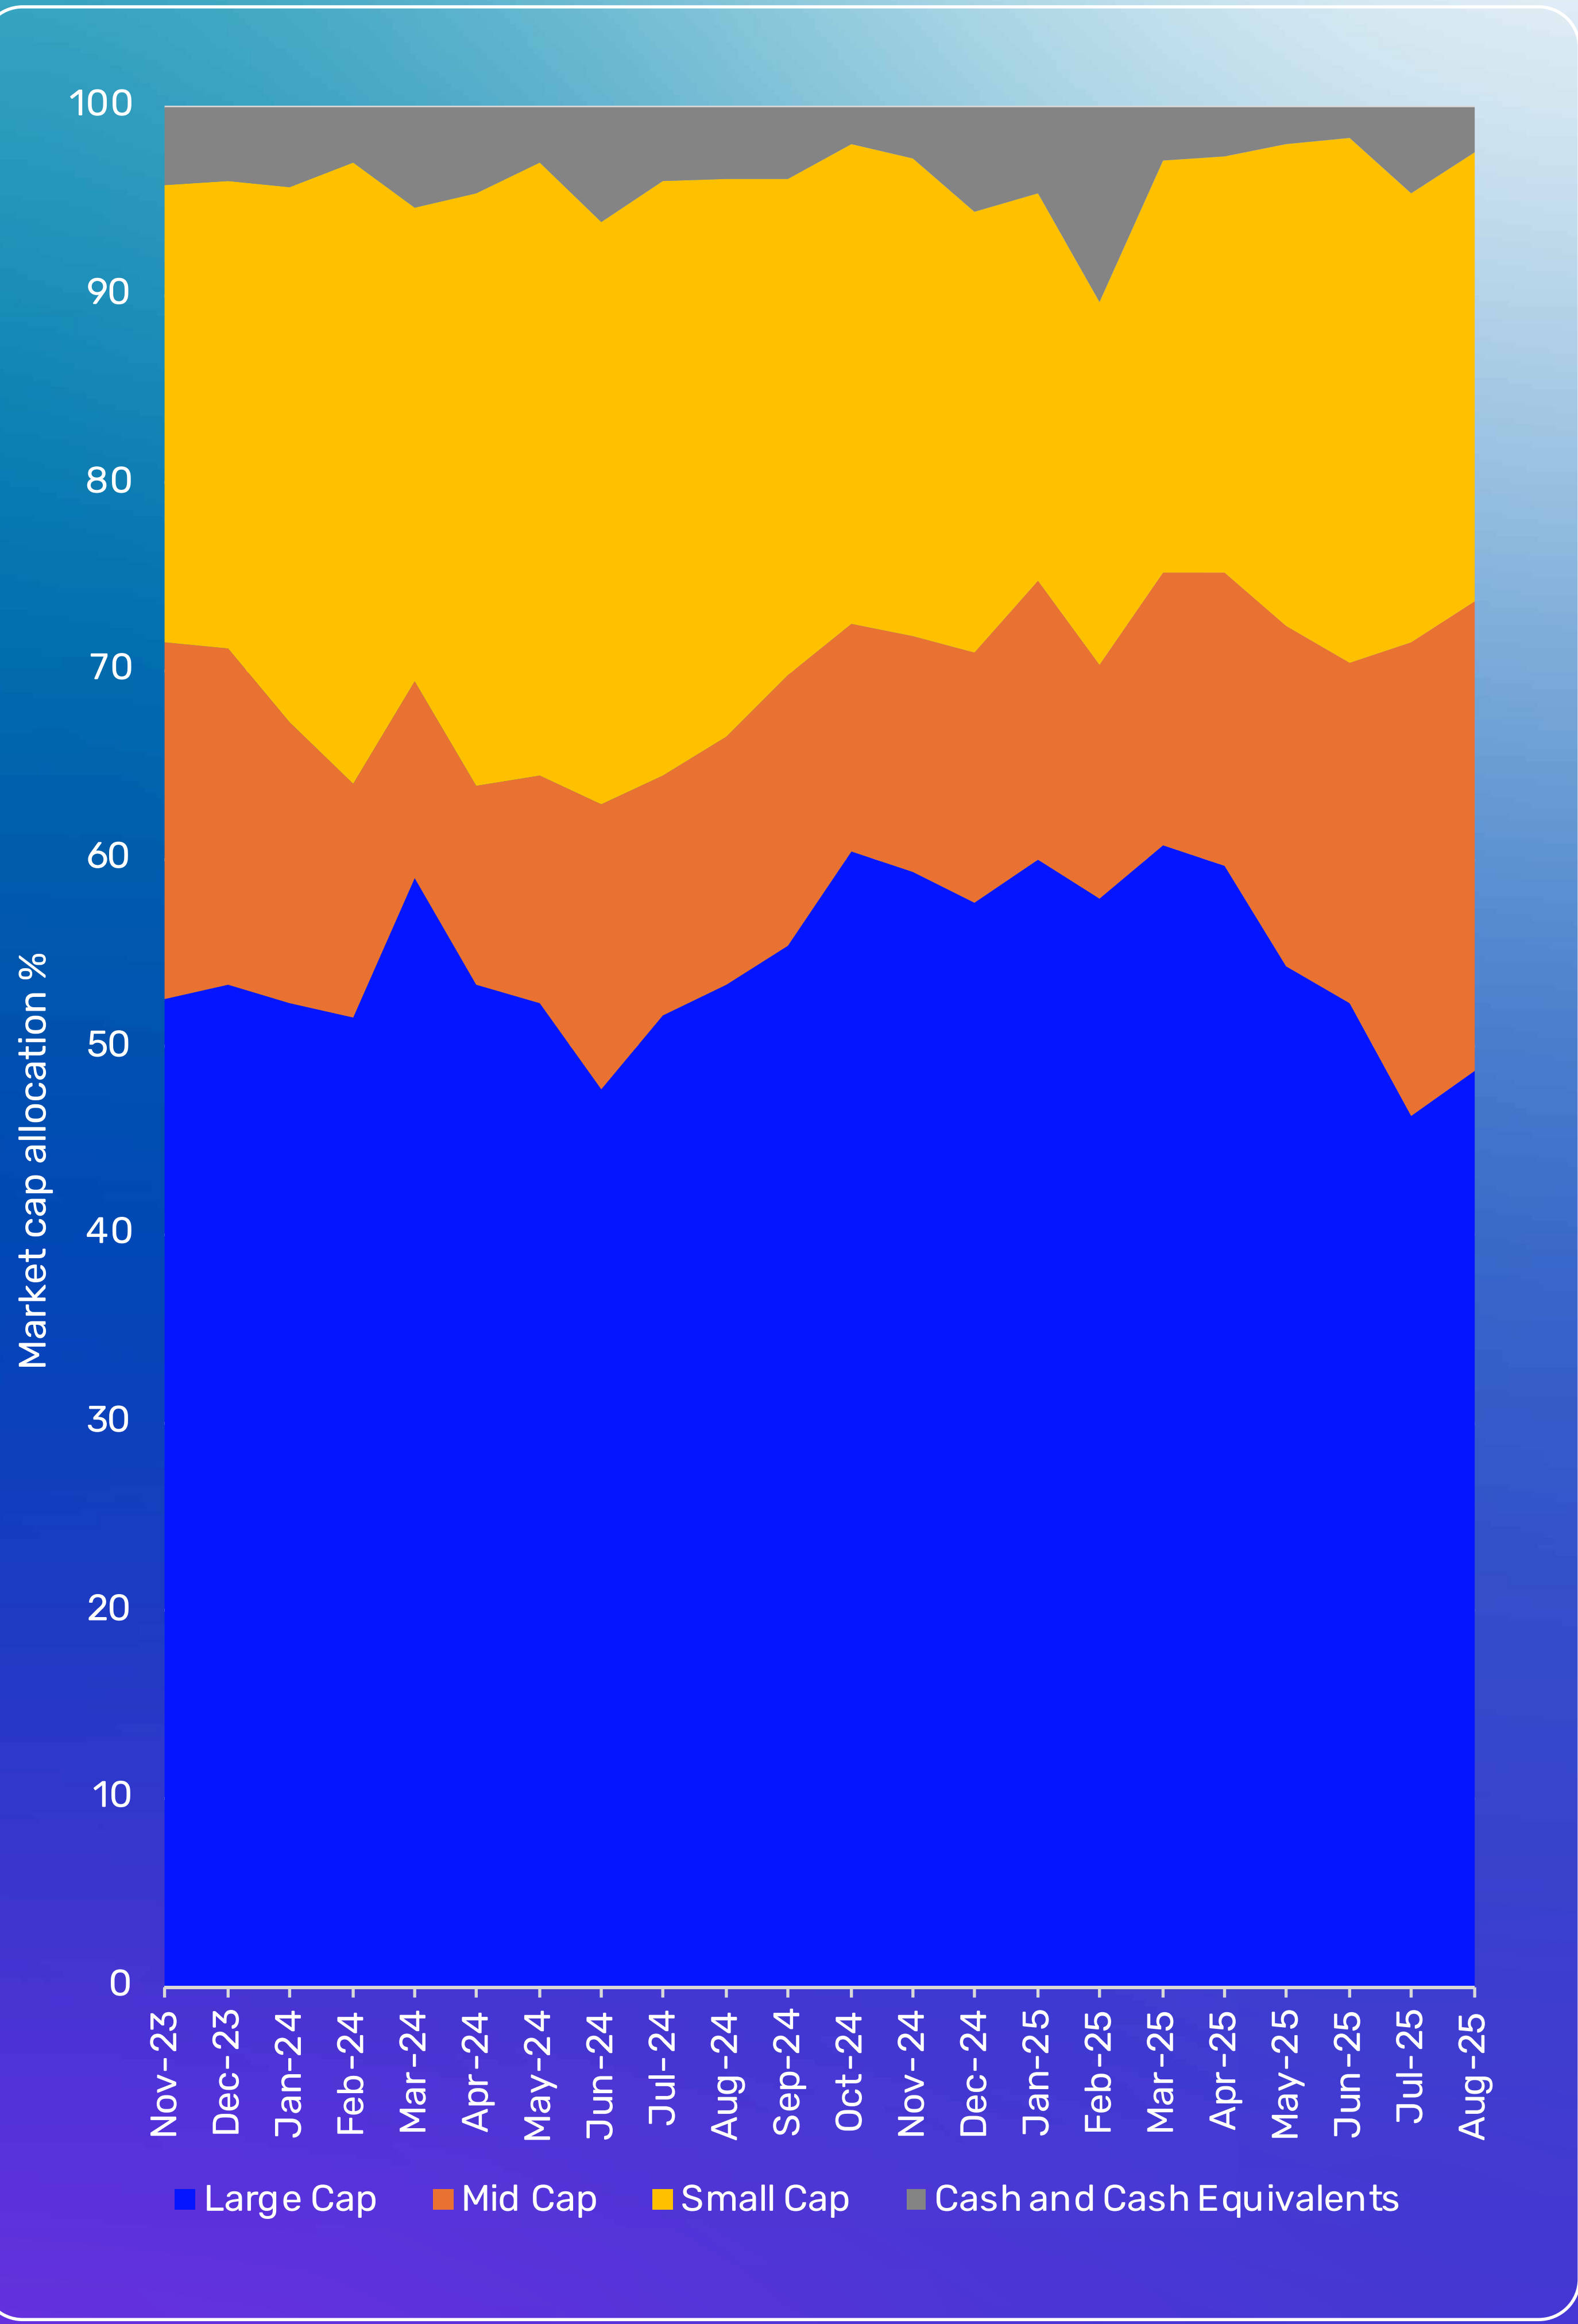

As a true-to-label flexi cap fund, we have actively managed allocations across market caps in response to evolving opportunities.

Over the past two years, our small-cap exposure has been managed dynamically – reduced from 32% (May '24) to 19% (Feb '25) in line with valuations and growth prospects, and currently adjusted to ~24% as risk-reward turned more balanced. This disciplined, dynamic allocation highlights our flexibility and focus on capturing opportunities while prudently managing risk.

Within small caps, portfolio concentration per security is kept low, helping us mitigate liquidity risk and providing flexibility on the AUM capacity. We remain committed to this strategy, ensuring consistency even as AUM grows multi-fold.

Data as on 31st August 2025

TRUE-TO-LABEL FLEXI CAP

SOME EXAMPLES OF MEGATRENDS-BASED STOCK SELECTION

Healthcare CRAMS –

Global Outsourcing & Digitisation of Healthcare

We are invested in a key player in contract research and manufacturing services (CRAMS), which stands at the intersection of rising global outsourcing and India's growing role in affordable, high-quality pharmaceutical manufacturing. Government initiatives to expand healthcare access and digitise infrastructure further amplify demand for such services, offering a long runway for growth.

Financialisation & Digitisation –

Market Infrastructure

Our exposure to a leading market infrastructure platform aligns with the megatrend of financialisation and digitisation in India. Rising household incomes and a shift from physical to financial assets are deepening participation in capital markets. Coupled with rapid digitisation, greater transparency, and regulatory support, platforms that enable efficient trading and risk management are positioned as structural beneficiaries of this trend.

Power Infrastructure –

Energy Transition & Electrification

Our portfolio includes a transmission and distribution solutions provider, directly benefiting from the megatrend of rising power demand. The global energy transition is driving electrification of transport, heating, and industrial activity, while near-shoring trends in the US and Europe are accelerating capacity expansion. This creates sustained demand for power equipment and grid modernisation, positioning such businesses as critical enablers of the transition.

SOME OF THE KEY EMERGING MEGATRENDS

1. Consumption Patterns: Discretionary spending typically accelerates once a nation crosses the inflection point of around \$2,500 per capita income. India has now surpassed this threshold, positioning its households—particularly in the mid- and high-income categories, to shift from ‘consume-to-live’ towards ‘consume more’, ‘consume better’, ‘consume well’, and ‘consume easy’.

2. Health and Wellness: Healthcare is evolving, with greater awareness, rising lifestyle diseases, expanding insurance coverage, and increasing digitization of infrastructure and services.

3. Global Energy Transition: Global energy transition, electrification of transport and heating, and near-shoring in developed markets drive rising electricity demand. Most of the investments for this transition are required in EV, power grids and renewables.

4. Generative AI Technologies: AI, including GenAI, analytics and deep learning, is estimated to unlock over USD 18 trillion in economic impact, with new use cases adding ~USD 4.5 trillion and productivity gains in existing activities contributing another ~USD 3.5 trillion.

5. Smart Urban Development: As urbanisation accelerates globally, with 58% of the population living in cities today, it is projected to reach 68% by 2050. By 2030, Asia will host 60+ megacities and India over 10 cities with populations above 5 million.

6. Financialization and Digital Innovation: Banks evolve into financial conglomerates as India’s Ultra High Net Worth Individual and High Net Worth Individual wealth doubles from USD 1 to 2 trillion (FY22–27). Rapid digital adoption sees UPI now drive 73% of all non-cash transactions in the country.

HIGH ACTIVE SHARE

We have maintained a high active share since inception, driven by deep research and behavioural insights to capture unique opportunities, building a resilient and adaptable portfolio.

SECTORAL ALLOCATION

QUARTERLY SECTORAL ALLOCATION

We remain bullish on themes including consumption, healthcare (CDMO), power, and digital platform businesses.

TOP 10 UNDERWEIGHT & OVERWEIGHT INDUSTRIES

All data as on 31st August 2025. Active Share, Top 10 Overweight and Top 10 Underweight is calculated vis-a-vis Scheme Benchmark i.e. BSE 500 TRI

PORTFOLIO – FUNDAMENTALS

EPS GROWTH* (%) 2YR CAGR (2025–27)

The fund’s expected EPS growth of 22.2% over FY25–27, compared to 8.1% for the benchmark, reflects its portfolio of companies with strong earnings growth potential.

*Estimated

PRICE-TO-EARNING (P/E)*

With a P/E of 50 versus 24 for the benchmark, the fund reflects a portfolio of companies with robust growth potential.

*Estimated

PRICE-TO-EARNING GROWTH (PEG%)

The fund’s lower PEG ratio of 1.6 versus 2.52 for the benchmark indicates stronger growth potential at more reasonable valuations.

A 22.2% EPS growth outlook at a relatively lower PEG(1.6) highlights the fund’s valuation edge over the benchmark.

PERFORMANCE SUMMARY

The scheme has delivered outperformance and generated alpha over the benchmark in the past two years, underscoring its resilience and strategic positioning to capitalize on future opportunities.

Scheme name	6 Months	1 Year	2 Years
	Absolute Return(%)*	Annualized Return(%)*	
Bajaj Finserv Flexi Cap Fund - Reg - Growth	16.32	0.36	19.45
Benchmark (BSE 500 TRI)	13.62	-4.31	15.92

Data as on 31st August 2025; Source: Internal Analysis; Past performance may or may not be sustained in future.

*DISCLAIMER:Returns <1 Yr Absolute, ≥ CAGR. Absolute Return and Annualised Return are calculated on a P2P basis. Ratios are calculated for a period of 3 years with monthly rolling and monthly frequency and Risk-free rate(5.54)is based on the FBIL Overnight MIBOR rate of as on last working day of the month.For Bajaj AMC schemes, ratios are calculated since inception with monthly rolling and monthly frequency. Max Drawdown is calculated within the one-day range. Returns for global funds pertains to previous business day as NAVs are disclosed at a one day lag.

RISK AND PERFORMANCE METRICS

With a standard deviation of 12.63 versus 14.22 for the benchmark and a Sharpe ratio of 1.22 versus 0.74, the scheme has delivered **robust risk-adjusted returns at relatively lower volatility.**

Data as on 31st August 2025; Source: Internal Analysis; Past performance may or may not be sustained in future.

RISK AND PERFORMANCE METRICS

Maintaining a relatively flat beta trendline reflects risk discipline, with the current portfolio **beta of 0.85** and a robust **Jensen’s alpha of 6.56** since inception underscoring its resilience and consistent outperformance through prudent portfolio construction and stock selection.

Data as on 31st August 2025 || Source: Internal Analysis || Past performance may or may not be sustained in future.

AUM GROWTH TREND

Within two years of inception, Bajaj Finserv Flexi Cap Fund has grown to an AUM of **₹5,410.04 crore across 2,52,388 folios** – a testament to the trust and momentum it has built among investors.

Data as on 31st August 2025; Source: MCR logic

OUR OUTLOOK

NIMESH CHANDAN
CIO, Bajaj Finserv AMC

SORBH GUPTA
HEAD - EQUITY, Bajaj Finserv AMC

Our bullish view on Indian equities remains intact. Despite heightened noise around U.S. tariffs, the direct impact on India appears limited. Services – the bulk of U.S.-linked earnings – remain unaffected, and only 55–60% of goods exports are under the new duties. While higher tariffs could push the U.S. economy toward stagflation, India’s export exposure is modest, with just ~2% of MSCI India’s revenues tied to goods exports.

In contrast, India’s domestic story is strengthening. Consumption is reviving, with several sector leaders reporting revenue growth and expressing optimism. Structural drivers such as expanding insurance coverage, digitisation, and favourable policy support continue to underpin earnings visibility. Q1FY26 results reflected this divergence: large caps posted strong double-digit growth, while mid- and small-caps were more moderate; IT disappointed, but healthcare, insurance, and private banks outperformed.

Global trade tensions may keep near-term volatility elevated. July saw the Nifty decline 2.8%, mid-caps 2.9%, and small-caps 4.3%, even as domestic institutions supported markets with \$4.4 bn inflows. Export-heavy sectors like textiles and gems may remain under pressure, while domestic-facing sectors and pharma are better insulated. If growth data softens further, the RBI may consider rate cuts, though rupee stability will remain a key constraint.

Looking forward, we expect a process of “de-worrification” – where fading uncertainty on geopolitics, trade, and monetary policy allows investors to re-rate Indian equities. Macro indicators are turning favourable, interest rates are easing, and fiscal policy is supportive. With India positioned to outgrow peers, markets should reward clarity, shifting sentiment from caution to opportunity.

Amidst the near-term noise around US tariffs, it is vital to maintain a long-term orientation while investing in equities. Identifying enduring changes around us – the megatrends – and analyzing their impact on companies is key to sustainable wealth creation in the long run.
